Contents

I	Fundamental Cosmology	1
Chapter 1	Cosmological Principle and FLRW Metric	2
1.1	Cosmological Principle	2
1.2	FLRW Metric	2
Chapter 2	Friedmann Equations and LCDM Model	3
2.1	Friedmann Equations	3
2.2	LCDM Model	3
II	Statistical Cosmology	4
Chapter 3	Perturbation Theory	5
3.1	Linear Perturbation Theory	5
3.2	Feynman Diagram and Kernels	5
3.3	Lagrangian Perturbation Theory	5
Chapter 4	Correlation Function and Spectrum	6
4.1	Correlation Function	6
4.2	Power Spectrum and Bispectrum	6
4.3	Consistency Relation	6
4.4	Squeezed Limit	6
Chapter 5	Halo Model and HOD	7
5.1	Spherical Collapse Model	7
5.2	Press-Schechter Formalism	7
5.3	Progenitor Distribution	7
5.4	Halo Occupation Distribution	7
III	Observational Cosmology	8
Chapter 6	Galaxy Clustering and RSD	9
6.1	Galaxy Clustering	9
6.2	Bias and Stochasticity	9
6.3	Redshift Space Distortion	9
Chapter 7	CMB, BAO and Supernova	10
7.1	Cosmic Microwave Background	10
7.2	Baryon Acoustic Oscillation	10
7.3	Supernova	10

Chapter 8 Lensing	11
8.1 Gravitational Lensing	11
8.2 CMB Lensing	11
Chapter 9 Other Probes	12
9.1 Cosmic Chronometer	12
9.2 21 cm Cosmology	12
9.3 Potential Decay Rate	12
IV Computational Cosmology	13
Chapter 10 N-body Simulation	14
10.1 Initial Conditions	14
10.2 Equations of Motion	14
10.3 Evolution Algorithms	14
10.4 Particle Assignment	14
Chapter 11 Bayesian Statistics and Monte Carlo Methods	15
11.1 Bayesian Statistics	15
11.2 Monte Carlo Methods	15
11.3 Monte Carlo Markov Chain	15
Chapter 12 Emulators and Machine Learning	16
12.1 Gaussian Processes	16
12.2 Convolutional Neural Networks	16
V Advanced Topics in Cosmology	17
Chapter 13 Early Universe	18
13.1 Inflation	18
13.2 Primordial Black Holes	18
13.3 Primordial Gravitational Waves	18
Chapter 14 Dark Energy and Modified Gravity	19
14.1 Dynamical Dark Energy	19
14.2 Clustering Dark Energy	19
14.3 Interacting Dark Energy	19
14.4 Modified Gravity Theories	19
Chapter 15 Constraints on Parameters and Models	20
15.1 Hubble Constant and S_8 Tensions	20
15.2 Neutrino Mass and Hierarchy	20
15.3 Non-Gaussianity	20

Chapter 16 Reconstructing the Universe	21
16.1 Reconstruction of Density Field	21
16.2 Reconstruction of Velocity Field	21
16.3 Reconstruction of Initial Conditions	21

Part I

Fundamental Cosmology

Chapter 1 Cosmological Principle and FLRW Metric

1.1 Cosmological Principle

1.2 FLRW Metric

Chapter 2 Friedmann Equations and LCDM Model

2.1 Friedmann Equations

2.1.1 First Friedmann Equation

2.1.2 Second Friedmann Equation

2.2 LCDM Model

2.2.1 Cosmological Constant and Dark Energy

2.2.2 Dark Matter

Part II

Statistical Cosmology

Chapter 3 Perturbation Theory

3.1 Linear Perturbation Theory

3.2 Feynman Diagram and Kernels

3.3 Lagrangian Perturbation Theory

Chapter 4 Correlation Function and Spectrum

4.1 Correlation Function

4.2 Power Spectrum and Bispectrum

4.2.1 Power Spectrum

4.2.2 Bispectrum

4.3 Consistency Relation

4.4 Squeezed Limit

Chapter 5 Halo Model and HOD

5.1 Spherical Collapse Model

5.2 Press-Schechter Formalism

5.3 Progenitor Distribution

5.4 Halo Occupation Distribution

Part III

Observational Cosmology

Chapter 6 Galaxy Clustering and RSD

6.1 Galaxy Clustering

6.2 Bias and Stochasticity

6.3 Redshift Space Distortion

Chapter 7 CMB, BAO and Supernova

7.1 Cosmic Microwave Background

7.1.1 Temperature Anisotropy

7.1.2 Polarization Anisotropy

7.1.3 Sachs-Wolfe Effect

7.1.4 Sunyaev-Zel'dovich Effect

7.2 Baryon Acoustic Oscillation

7.3 Supernova

Chapter 8 Lensing

8.1 Gravitational Lensing

8.1.1 Weak Lensing

8.1.2 Strong Lensing

8.2 CMB Lensing

Chapter 9 Other Probes

9.1 Cosmic Chronometer

9.2 21 cm Cosmology

9.3 Potential Decay Rate

Part IV

Computational Cosmology

Chapter 10 *N*-body Simulation

10.1 Initial Conditions

10.2 Equations of Motion

10.3 Evolution Algorithms

10.4 Particle Assignment

Chapter 11 Bayesian Statistics and Monte Carlo Methods

11.1 Bayesian Statistics

11.2 Monte Carlo Methods

11.3 Monte Carlo Markov Chain

Chapter 12 Emulators and Machine Learning

12.1 Gaussian Processes

12.2 Convolutional Neural Networks

Part V

Advanced Topics in Cosmology

Chapter 13 Early Universe

13.1 Inflation

13.2 Primordial Black Holes

13.3 Primordial Gravitational Waves

Chapter 14 Dark Energy and Modified Gravity

14.1 Dynamical Dark Energy

14.2 Clustering Dark Energy

14.3 Interacting Dark Energy

14.4 Modified Gravity Theories

Chapter 15 Constraints on Parameters and Models

15.1 Hubble Constant and S_8 Tensions

15.2 Neutrino Mass and Hierarchy

15.3 Non-Gaussianity

Chapter 16 Reconstructing the Universe

16.1 Reconstruction of Density Field

16.2 Reconstruction of Velocity Field

16.3 Reconstruction of Initial Conditions
